ACT Voluntary Performance Guidelines for Woven Fabrics

To give architects, designers, and end-users a vast amount of performance information in a succinct visual way, ACT developed icons to indicate that a fabric meets or exceeds guideline requirements. Look for these Registered Certification Marks on ACT Member Company sampling to assure that the fabrics you specify perform up to contract standards and pass all applicable testing.

All ACT Voluntary Performance Guidelines cover woven, coated and knit fabrics for indoor use. “Woven Fabrics” consist of two sets of yarns, warp and filling, formed by weaving, which is the process of interlacing these sets of yarns.

Test methods included in the Guidelines measure fabric performance under standard laboratory conditions and are intended to represent the most current test version. Note: Individual ACT Member product information may represent a different version of a test method depending on the date the product was introduced to market.

Important: These tests represent minimum requirements, which are subject to change without notice and may not reflect requirements or laws in all locations.

Flammability

The measurement of a fabric’s performance when it is exposed to specific sources of ignition.

Note: ACT guidelines specify different flammability tests dictated by the intended end use for the fabric.

ACT GUIDELINES

Upholstery
California Technical Bulletin 117-2013 Section 1 – Pass

Direct Glue Wallcoverings and Adhered Panels
ASTM E84 (Adhered Mounting Method) – Class A or Class 1

Wrapped Wall Panels and Upholstered Walls
ASTM E84 (Unadhered Mounting Method) – Class A or Class 1

Panel System Furniture
Any one or combination of the following: UL recognized component under Office Panel Fabrics category, UL 1286 Listed, ASTM E84 (Adhered or Unadhered Mounting Method) – Class A or Class 1

Drapery
NFPA 701 Method 1 or 2 as appropriate – Pass
Transfer of dye from the surface of a dyed or printed fabric onto another surface by rubbing.

|                   | Wet Crocking, Grade 3 minimum |

| AATCC 116 (Prints) | Dry Crocking, Grade 3 minimum  
|                    | Wet Crocking, Grade 3 minimum |
## Colorfastness to Light

A material’s degree of resistance to the fading effect of light.

### ACT GUIDELINES

| Category                          | AATCC Method | Grade Requirement | Hours *
|-----------------------------------|--------------|-------------------|--------
| Upholstery                        | AATCC 16 Option 1 or 3 | Grade 4 minimum | 40 hours
| Direct Glue Wallcoverings         | AATCC 16 Option 1 or 3 | Grade 4 minimum | 40 hours
| Wrapped Panels and Upholstered Walls | AATCC 16 Option 1 or 3 | Grade 4 minimum | 40 hours
| Drapery                           | AATCC 16 Option 1 or 3 | Grade 4 minimum | 60 hours

*Note: There is no direct correlation between the numbers of testing hours and hours of service in the field.*
Key factors in assessing overall durability of a fabric vary depending on the fabric construction.

**ACT GUIDELINES**

**Upholstery**
- Pilling
  - ASTM D3511 (Brush Pill), Class 3 minimum
  - Or
  - ASTM D4970, (Martindale Tester), Class 3 minimum

*Pilling* is the formation of fuzzy balls of fiber on the surface of a fabric that remain attached to the fabric.

Aesthetic issues of pilling and fuzzing that sometimes occur on textile products do not impact the durability or functionality of the material. Laboratory testing provides some insight into the propensity for a textile to pill or fuzz; however, lab tests alone cannot predict field performance since they do not consider variables (e.g., care and maintenance, misuse, environment) encountered in the actual end-use application.

**Breaking Strength**
- ASTM D5034 (Grab Test), 50 lbs. minimum in warp and weft

*Breaking Strength* is the measurement of stress exerted to pull a fabric apart under tension.

**Seam Slippage**
- ASTM D4034, 25 lbs. minimum in warp and weft

*Seam Slippage* is the movement of yarns in a fabric that occurs when it is pulled apart at a seam.

** Wrapped Panels and Upholstered Walls**
- Breaking Strength
  - ASTM D5034 (Grab Test), 35 lbs. minimum in warp and weft

**Drapery**
- Seam Slippage
  - ASTM D434 using the D3597 modification for fabrics over 6 oz./sq. yard, 25 lbs. minimum in warp and weft.
Abrasión

La superficie desgaste de un tejido causado por fricción.

**ACT GUÍLINES**

**Low Traffic / Private Spaces – Woven Upholstery Fabrics**

ASTM D4157 (ACT approved #10 Cotton Duck)
15,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)
20,000 cycles Martindale method

**High Traffic / Public Spaces – Woven Upholstery Fabrics**

ASTM D4157 (ACT approved #10 Cotton Duck)
30,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)
40,000 cycles Martindale method

**Disclaimer:**
Abrasion test results are not necessarily a reliable indicator of fabric lifespan. Comparative laboratory testing results on the same textiles frequently differ and testing methods do not necessarily correlate well with the variables encountered in actual use by the end-user. Licensees using the ACT performance certification marks and publishing test results exceeding the ACT high-traffic abrasion guideline are required to provide the following statement on their samples, digital media, marketing materials, social media posts, direct and third-party websites:

Abrasion test results exceeding ACT Performance Guidelines are not an indicator of product lifespan. Multiple factors affect fabric durability and appearance retention.

**Notes:**
ACT studies indicate that results of multiple abrasion tests performed on some fabric structures may vary significantly – as much as 60 percent or more. There is no correlation between Wyzenbeek and Martindale results. For more information please refer to abrasion white papers on the ACT website:

IMPORTANT INFORMATION AND DISCLAIMERS REGARDING ACT’S
VOLUNTARY PERFORMANCE GUIDELINES

As noted above, ACT’s Voluntary Performance Guidelines ("Guidelines") and associated symbols ("Marks") are
for information purposes only and are made available to help assist specifiers and end-users in evaluating
certain characteristics of contract textiles.

Neither the Guidelines, nor the Marks constitute any promise, representation or warranty that a product or
sample that bears or to which a Mark is referenced will in fact comply with applicable federal, state, or municipal
laws, codes, rules and regulations concerning the intended use of such product ("Laws"), nor any assurance,
representation or guarantee regarding or relating in any manner to the safety of any product or sample that bears
or, to which a Mark is referenced.

Whenever appropriate, specifiers and end users should seek the advice of professionals or other knowledgeable
persons to ascertain whether a product will in fact comply with applicable Laws.

Understand that the testing and standards ("Standards") referenced in the Guidelines are developed and
promulgated by third parties not associated with ACT, and that these Standards often change or are
supplemented by such third parties. Accordingly, the fact that a particular Standard is referenced in the
Guidelines (and/or associated with any Mark) does not mean, nor is it intended to be a representation
that Standard is the most current one.

It is the responsibility of the contract textile vendor and/or the manufacturer (not ACT) to determine in all
instances whether or not a textile meets each of the Standards to which a particular Mark is referenced.

THE ASSOCIATION FOR CONTRACT TEXTILES EXPRESSLY DISCLAIMS LIABILITY TO ANY AND ALL PERSONS AND
ENTITIES FOR PERSONAL INJURY, PROPERTY DAMAGE, AND ANY OTHER DAMAGE OF ANY KIND OR NATURE,
(WHETHER OR NOT SUCH DAMAGES ARE DIRECT, INDIRECT, CONSEQUENTIAL OR COMPENSATORY) RESULTING
FROM, OR IN ANY WAY RELATING TO THE GUIDELINES AND MARKS.

The marks ☮ ☯ ☬ ☦ are Registered Certification Marks at the US Patent and Trademark Office and
are owned by the Association for Contract Textiles, Inc.
